Lessons learned

- Working with APIs
    - Making several requests to retrieve, clean and concatenate data.
- Flux architecture
    - Creating explicit and understandable update paths for your application's data, which makes tracing changes during development simpler and makes bugs easier to track down and fix.
- Better knowledge of the jQuery library, AJAX, and JSON

Problems encountered

- API had a 20 requests per minute limit.
- Errors (400) when country doesn't have iTunes library
